Swell Slides instructions | page 2 of 2

1. Download the Swell Slides App from the Help Desk

- Download the app onto the device you will use during the event!
- Log in using your existing dashboard login

2. Select the correct event & double check your settings

- Your settings, slides, and backgrounds will be saved from the dashboard
- In need of a quick change or edit, you are able to adjust the settings here in the app

3. Select "Start Slideshow"

- P.S. The first download is always going to take the longest!

4. *Ta-Da!* Enjoy your show and start engaging your guests!

- ## EQUIPMENT TIPS

- Computers (laptops) used for the Swell Slides App during an event can be PC or Mac. Consider the age and processor speed of the laptop used to run Swell Slides on a big screen. A computer that can output at a resolution of 1980x1080p is recommended.

- Low resolution projectors may require adjustments to the font size and the size of the images loaded into the slides system.

- Internet Bandwidth. In order to load new social media posts, the app requires a minimum download speed of 15+ mbps. The initial login initiates the download of all slides and video that will be used during the presentation. This download requires an internet connection but can be accomplished offsite prior to an event.
